

Some notes about Mary Kay's Replenishing Serum +C:

- Product targets lifting & firming
- Product ingredients include fruits that are known to have a high level content of Vitamin C
- Vitamin C alone breaks down easily and is not stable (continuing to be active in the skin for a long time)
- Product ingredient Kakadu Plum Extract is from the Australian Outback. Vitamin C in this particular fruit is reported to be stable.
- Product ingredient Camu Camu (*myrciaria dubia* if written in Latin) Found in the Amazon Jungle & has high contents of Vitamin C
- Product ingredient Argan Seed boosts collagen & elastin in skin
- Product ingredient Pomegranate is a super fruit with high levels of Vitamin C & Antioxidants
- The Replenishing Serum+C plays an essential part in decreasing the damage associated with free radicals that damage the skin as well as aiding in the synthesis of collagen & in defending the supportive network that gives skin its definition and fullness.
- The Replenishing Serum+C is the result of extensive research by MK Scientists for the most effective natural sources of Vitamin C a/k/a ascorbic acid.
